SUMMARY

Innovative engineering leader with 6+ years of experience building and scaling backend systems, integrating AI solutions, and driving technical strategy in fast-paced environments. Proven record of setting product direction, leading cross-functional teams, and architecting infrastructure for high-growth businesses. Adept at partnering with founders, developing AI-powered features, and delivering robust, scalable applications in payments and developer tooling.

EXPERIENCE

Senior Product Manager / Technical Lead Microsoft • microsoft.com

03/2021 – Present
Redmond, WA

- Defined and set technical strategy for Azure DevOps, leading a cross-functional squad of 12 in designing and delivering scalable, cloud-based solutions serving enterprise clients.
- Architected and integrated AI-driven analytics features leveraging Azure Cognitive Services and ML models, boosting product adoption by 35%.
- Built robust APIs and developer tooling, enabling seamless integration with third-party platforms and payment providers.
- Championed infrastructure modernization, introducing microservices architecture and automated CI/CD pipelines to accelerate delivery and improve system reliability.
- Partnered with founders and product leadership to shape roadmap, established engineering best practices, and presented technical solutions on high-stakes calls with clients.
- Drove adoption of agile methodologies and introduced the OKR framework, improving team alignment by 50% and accelerating feature delivery.

Product Manager / Backend Engineer Amazon • amazon.com

06/2018 – 02/2021
Seattle, WA

- Led backend engineering and product lifecycle for seller payment and analytics tools used by 100K+ merchants, increasing user satisfaction from 3.2 to 4.5 stars.
- Collaborated with engineering teams to launch real-time payment reconciliation, fraud detection modules, and AI-powered transaction insights.
- Designed and implemented high-availability APIs and event-driven infrastructure supporting secure, scalable payment integrations.
- Drove UX optimization and API documentation improvements, reducing support tickets by 25% and enhancing onboarding for developer partners.
- Represented the engineering team in client demos and sales calls, translating technical value into business outcomes for stakeholders.

KEY PROJECTS

AI-Powered Product Prioritization Tool • Internal Platform

Microsoft

- Designed and engineered a data-driven prioritization tool leveraging ML algorithms to analyze user engagement metrics and automate product roadmap decisions.
- Adopted by 50+ PMs and engineering leads, accelerating roadmap planning and aligning execution with business goals.

Open Source Product Management Framework • Developer Tooling • github.com/sarahjohnson/pm-framework

- Created an extensible, API-first framework for efficient product management, achieving over 1,000 GitHub stars and adoption within developer teams globally.
- Integrated AI-powered analytics components and seamless payment provider modules to support SaaS and fintech use cases.

TECHNICAL SKILLS

Languages: SQL, Python, JavaScript, TypeScript

Backend: API Design, Microservices, CI/CD, Cloud Infrastructure (Azure, AWS), Payment Integrations, Event-driven Architectures, NoSQL/Data Modeling

AI/ML: Azure Cognitive Services, Analytics Pipelines, A/B Experimentation, Data-driven Feature Development

Developer Tools: Mixpanel, Amplitude, Git, Jira, Figma, Confluence

Methodologies: Agile/Scrum, OKRs, Cross-functional Leadership

EDUCATION

MBA in Technology Management • Stanford Graduate School of Business • Stanford, CA • 2018 • GPA: 3.9/4.0

B.S. in Computer Science • University of Texas at Austin • Austin, TX • 2016 • GPA: 3.7/4.0
