SUMMARY

Experienced engineering leader and founding team builder with 6+ years driving the design, development, and launch of scalable software and AI-powered products. Proven expertise at the intersection of backend engineering, payments, and infrastructure, with hands-on delivery of developer tools and complex system integrations in high-growth environments. Collaborative partner to product and business teams with a passion for shaping technology, culture, and early-stage outcomes.

EXPERIENCE

Senior Product Manager, Azure DevOps (AI and Infrastructure) Microsoft • microsoft.com

03/2021 – Present
Redmond, WA

- Drove technical strategy and full-stack roadmap for Azure DevOps, directly integrating leading **AI models** and **developer tool** APIs for enterprise clients.
- Architected and shipped scalable backend solutions supporting **hundreds of thousands** of CI/CD pipelines, focusing on high-throughput and secure data handling for payments and automation workflows.
- Collaborated with founders and senior leadership to define platform architecture and set technical direction aligned to fast-evolving market needs.
- Acted as a forward-deployed technical partner, translating engineering capability to customers during **sales cycles**, accelerating onboarding of Fortune 500 enterprises.
- Spearheaded integration with payment processors and cloud infrastructure providers, improving feature reliability and reducing transaction latency by **30%**.
- Led a cross-functional team of 12 (engineers/designers), cultivating agile culture and best practices for a rapidly scaling organization.

Product Manager, Seller Infrastructure & Payments Amazon • amazon.com

06/2018 – 02/2021
Seattle, WA

- Owned the end-to-end delivery of platform tools and **payments infrastructure** supporting 100K+ marketplace merchants.
- Partnered with engineering to design and launch secure API integrations with leading payment gateways and AI-driven merchant analytics.
- Reduced payment processing time by **25%** and improved transactional scalability through backend system enhancements and distributed architecture.
- Collaborated with product and technical teams across three continents to deliver real-time financial reporting and developer-facing documentation.
- Enhanced data-driven decision making by championing advanced experimentation (A/B tests) and analytics pipelines, leading to increased seller satisfaction and engagement.
- Presented technical and product strategy to VP- and C-level stakeholders, influencing roadmap for next-generation commerce infrastructure.

KEY PROJECTS

AI-Powered Product Prioritization Tool • Internal SaaS Platform

- Designed and built an internal tool leveraging **AI-driven scoring algorithms** for feature prioritization, adopted by 50+ PMs; improved product velocity and alignment with business outcomes.

Open Source Product Management Framework • Public • github.com/sarahjohnson/pm-framework

- Created and maintained an open-source framework for product teams focused on agile delivery, developer experience, and system integrations; **1,000+ GitHub stars** and active community adoption.

TECHNICAL SKILLS

Programming: Python, SQL, REST APIs, Shell

AI Tools: OpenAI API, Azure AI, Data Analysis, Experimentation

Infrastructure: AWS, Azure Cloud, Payments Integrations, Distributed Systems, Developer Tooling

Product/Agile: Mixpanel, Amplitude, Google Analytics, Figma, Jira, Agile/Scrum

EDUCATION

MBA in Technology Management • Stanford Graduate School of Business • Stanford, CA • 2018 • GPA: 3.9/4.0
Dean's List, Product Management Fellowship

B.S. in Computer Science • University of Texas at Austin • Austin, TX • 2016 • GPA: 3.7/4.0
